

The beauty of the new Maloney V3 Phantom™ Splice/Test Station is that nobody (except you) will notice it.

We all know the big problem associated with most splice/test stations. They LOOK different. And because of this they are a tempting target of vandals, scavengers, and the curious. The new **Phantom** Splice/Test Station from Maloney is different, because to the untrained eye, it looks like just another Maloney LineMRKR™ seen all across the country.

The **Phantom** Splice/Test Station is available with round dome caps in any color to fit your needs. Don't tempt fate any longer. Begin today to incorporate the **Phantom** Splice/Test Station in all your linemarking projects.

Dome is available in any color (white is standard)

Any configuration of terminals and any hole patterns are possible

Internal sleeve with locking nut attaches dome using a bolt with cup washer and a standard can wrench (216C tool)

Support post is the standard Maloney LineMRKR™ Polyethylene construction

The **Phantom** Splice/Test Station dome is secured using a standard can wrench (216C tool). Inside, users have a choice of placement of the terminal, and terminals are available in any bolt pattern. For more information contact Maloney today.
